# Syllabus Fall 2022

Welcome to ITCS 4152/5152 — Computer Vision! My name is Srijan Das, and I will be your instructor for this course. This is a challenging course that covers a lot of technical and application-oriented material. However, if you stay on track with weekly activities and avail of the numerous opportunities to seek help when needed, I see no reason why you would not succeed in this class. Start your journey by reading this syllabus in detail.

#### **Course Information**

Course Number ITCS 4152/5152 Course Title: Computer Vision

Term: Fall 2022 Credit Hours: 3

Mode of delivery: in-person

Meets: Tuesday and Thursday 5:30 PM – 6:45 PM

Location: CHHS 155

Online materials and video conferencing: Canvas, Piazza and Zoom

**Instructor**: Srijan Das

Contact: sdas24 "at" uncc.edu

Office Hours: Wednesday 3:00 PM - 5:00 PM

Location: Woodward 230B

TA: Kavya Chigurupati (kchiguru@uncc.edu)

Pranav Bhasker Reddy Singi Reddy (psingire@uncc.edu)

TA Office Hours: TBD

## **Course Description**

Computer Vision is the study of enabling machines to "see" the visual world (i.e., understand images and videos). In this course, the students will learn fundamental computer vision algorithms and have opportunities to implement them. Further, we will be discussing more recent state-of-the-art visual representation learning approaches.

## **Course Prerequisites**

For ITCS 4152, this course has a perquisite of ITSC 2214 and MATH 2164. The concepts of Linear Algebra and Matrices will be crucial in understanding the foundations of this course. If you have

not mastered some concepts in 2164, please get in touch with me or the TAs for additional resources/help. Also, the ability to program will be a plus point. We will be programming in Python (OpenCV, NumPy, SciKit).

## **Course Objectives**

Having successfully completed the first module of this course you will be able to:

• Implement basic image processing algorithms

Having successfully completed the next two modules of this course, you will be able to demonstrate knowledge and understanding of:

- Current approaches to image formation and image modelling
- Current approaches to basic image processing and computer vision
- Human and computer vision systems

Having successfully completed the last module of this course you will be able to:

- Develop and evaluate solutions to problems in computer vision
- Demonstrate awareness of the current key research issues in computer vision
- Analyze and design a range of algorithms for image processing and computer vision

## List of Topics to be covered

- Module 1: Fundamentals of Computer Vision
  - o Image Formation
  - Filters
  - Edges
  - Local Features & Matching
- Module 2: Deep Neural Networks
  - Basics of DNNs
  - Convolutional Neural Networks (CNNs)
  - Image Classification
- Module 3: Applications of Computer Vision
  - Object Segmentation & Detection
  - Video Understanding
  - Recurrent Neural Networks
- Module 4: Advanced Computer Vision
  - Attention Mechanism
  - Visual Transformer
  - Self-supervised Learning for Visual Representation

#### **Textbooks**

Computer Vision: Algorithms and Applications by Richard Szeliski

Computer Vision: A Modern Approach by David Forsyth and Jean Ponce

#### Assessment

### **Course Grades**

- **Assignments** (45%): 3 homeworks (programming intensive)
  - You are expected to do homeworks by yourself.
  - Even if you discuss them with your classmates, you should turn in your own code and write-up. Do not share your code!
  - o 3 free late dates for the semester, after that 10% penalty per day.
  - You cannot exceed a max of 4 late days per assignment.
- Final Project (30%): team project with presentation and reports
- Mid-term Exam (20%)
- Class participation (5%)

## **Grading Scale**

90% and above: A

• 80% to 89.99%: B

• 70% to 79.99%: C

60% to 69.99%; D

Below 60%: F

## **Course Policies**

- My (instructor's) commitment: You can expect me to be courteous, respectful, and punctual; be well organized and prepared for class; answer questions clearly and in a non-negative fashion; be available during posted student drop-in / office hours or notify you beforehand if I am unable to keep them.
- Your commitment: The best way to learn and master the concepts covered in this course is to engage with the course material and then engage in discussions and activities with your fellow students and your instructional team (i.e., instructor/TAs).
- Course material: All course material will be available on Canvas. Please check Canvas periodically. Course materials, including presentations, tests, exams, outlines, and similar materials, are protected by copyright. You are free to take notes and make copies of course materials for your own educational use. However, you may not, nor must you allow others to reproduce or distribute lecture notes and course materials publicly without my express written consent. This includes providing materials to commercial course material suppliers such as CourseHero, Chegg and other similar services. If you

- publicly distribute or display or help others publicly distribute or display copies or modified copies of the course material, you may be in violation of University Policy 406 (https://legal.uncc.edu/policies/up406), The Code of Student Responsibility.
- Course announcements and communication: I will use Canvas or Piazza for all
  announcements and other course related communications. Please make sure to check
  Canvas or Piazza on a regular basis to ensure that you do not miss any important
  information. You should also use Piazza to ask/answer questions pertaining to the class.
  Please use email communication only for personal/grade related issues.
- Exercises/Assignments: You will work on numerous exercises/assignments throughout the semester. These exercises are designed to help you apply and / or get hands-on experience with course concepts. You are encouraged to discuss the questions with your lightweight team, but you must individually submit the exercise/assignment on Canvas (e.g., for questions that require a written response, you may discuss the idea in your team, but must write the final answer in your own words; for exercises/assignments that require you to write a program, you may discuss the algorithm/steps with your team, but you must write the final program on your own). Most exercises/assignments that have autograded components allow two attempts, giving you an opportunity to correct mistakes you may make on auto-graded questions during your first attempt. All exercises/assignments have firm due dates, with a grace period where you can still submit, but will incur a small penalty. Having firm due dates will help you stay on track with course material and will help us give you timely feedback on your submissions.
- **Grading**: Teaching assistants will be responsible for grading in-class activities, tests and assignments. If you believe that an error has been made in grading, please bring it to the TA. If you are unable to resolve the issue with the TA, please reach out to me.
- **Engagement**: As mentioned earlier, this class is a collaborative space. A portion of your overall course grade will be determined based on how you engage with me, your TAs and with your lightweight team members. Details about how points will be awarded/deducted will be posted explicitly on Canvas.
- Missed course work/tests: If you have any medical emergencies, care-giver concerns or
  other documented reasons for being unable to submit exercises/assignments on time,
  being unable to attend a test, etc., please reach out to me (ahead of time whenever
  possible) and we can work together to find a suitable solution.
- Academic Integrity: You are expected to follow the UNC Charlotte Code of Student (<a href="http://legal.uncc.edu/policies/up-407">http://legal.uncc.edu/policies/up-407</a>) Academic Integrity (<a href="http://legal.uncc.edu/policies/up-407">http://legal.uncc.edu/policies/up-407</a>) for all activities, exercises, assignments and tests in this course. This includes following all of the written / verbal instructions given to you by the instructional team and guidelines for authorized collaboration where relevant. I will have to report all cases of academic misconduct to the Dean of Students' Office.
- Disability services: Many students have visible or invisible disabilities. UNC Charlotte is committed to access to education and offers accommodations that allow all students to achieve their full potential. If you have a disability and need academic accommodations, please send me your accommodation letter as early as possible. You are encouraged to meet with me to discuss the accommodations outlined in your letter. For more

- information on accommodations, contact the Office of Disability Services (https://ds.uncc.edu/) at 704-687-0040 or disability@uncc.edu.
- Non-discrimination: No student will be discriminated against in this class based on age, race, nationality, religion, sexual orientation, gender identity/expression, veteran's status, country of origin, or group affiliation. You are expected to behave in a respectful manner towards others in the class, both in virtual and face-to-face settings. Continuous or repeated disrespectful behavior will be considered to be creating a hostile environment, which constitutes a violation to the University Policy 406 (<a href="https://legal.uncc.edu/policies/up-406">https://legal.uncc.edu/policies/up-406</a>), Code of Student Responsibility. In such a case, you will be referred to the Office of Student Conduct or the Title IX Office. Based on such referral, the Director or designee will determine whether a Formal Charge(s) shall be pursued and whether the Formal Charge(s) constitutes a Minor Violation or a Serious Violation, based on your prior record or facts and circumstances related to the case.
- **Syllabus Revisions**: I may modify standards and requirements set forth in this syllabus if a need arises. I will notify you of any such changes by announcement on Canvas/Piazza and revision to this syllabus page.

## **Acknowledgement**

This course has been inspired by the Computer Vision course by Kristen Grauman (Meta/UT), Devi Parikh (Meta/Gatech), Michael S. Ryoo (Google/Stony Brook), and Shree K. Nayar (Columbia). This syllabus structure is adapted from ITSC3146 by Harini Ramaprasad (UNC Charlotte).
